**SWEET PEPPER, or Bell Pepper, is the common name of CAPSICUM--a fruity, sweet, and colorful species of vegetable.**

**It's native to the warmer parts of the Americas, and is now cultivated worldwide for their chili pepper or sweet pepper fruit.**

**Sweet Peppers can be eaten raw, like in a salad. Or they can be cooked- which makes them even sweeter!- in stews or soups or even on it's own, as a dip. Or they can be dried and made into spices like paprika or chili powder.**

Did you know that GREEN sweet peppers are actually unripe RED peppers???

YELLOW and ORANGE peppers are the same vegetable too; they are each simply picked at different stages of their growth!

**Capsicum is a genus of flowering plants in the nightshade family (also called Solanaceae!)**

**Chili Peppers are also Capsicums and are related to Sweet Peppers, they are just usually spicier...**
